

THE ENERSPHERE™

GAS STORAGE BY ENERAQUE RENEWABLES.

THE ENERSPHERE™

Eneraque Renewables' range of superior biogas storage tanks enables the storage of significant quantities of different gases. These biogas storage systems allow planned biogas storage so that generation plant managers can gather sufficient quantities of fuel in the event of planned export to the grid at a peak price point to optimise revenue.

The EnerSphere is a trusted and proven advanced engineered gas storage system, developed using global industry research and technical expertise:

- Highly tear resistant polyester fabrics with a special PVC surface treatment and acrylate varnish.
- High resistance against permeability, UV (with temperature resistance from -30°C to $+60^{\circ}\text{C}$) and is resistant to heavy wind, snow and is highly flame proof (according to DIN 4102-B1)
- Significant uptake in the storage of Biogas, being highly resistant to the impact of various biogas ingredients
- Installation and commissioning in as little as 9 days.

The EnerSphere double membrane consists of:

- Inner membrane
- Outer membrane
- Anchorage system
- Air pressurisation fans
- Air regulation system
- Gas over-pressure relief system
- Gas level management
- Gas leak detection

ONE PROJECT PARTNER.

Explore.

Partnership through professional service fees.

Design.

Via professional design service fees.

Build.

Via a Design & Build Contract.

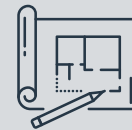

Operate. Maintain

Via service bookings or 5 & 10 year maintenance contracts.

PRE-FEASIBILITY & FEASIBILITY STUDIES.

Benefit from our global supply chain for spare parts, with access to unique components from our global distribution partners, including all major brands.

PROJECT DESIGN.

Optimise your project with Eneraque's expert design services. We create tailored, strategic solutions that align with your energy goals.

EPCM.

We provide integrated engineering, procurement, construction and ongoing management solutions for seamless project execution. We focus on maximising performance and meeting your project deadlines.

ASSET LIFECYCLE MAINTENANCE

Five and ten year operations & maintenance contracts. Scheduled servicing and fault troubleshooting for gas engines, back up generators, flares, pumps and more.
